

Power Platform Assessment

Unlock business value with a Power Platform Assessment that targets high-impact automation opportunities

Many organisations struggle to prioritise automation initiatives, streamline operational workflows, and fully leverage their existing technology investments. Without a structured approach, teams can spend months building solutions that deliver limited impact, leaving business pain points unresolved and opportunities missed.

The OneAdvanced Power Platform Assessment provides a structured review of your current processes, technology use, and business challenges to identify the highest-impact opportunities for automation and application development. Through discovery, facilitated workshops, and detailed analysis, we deliver a clear roadmap of actionable use cases, along with recommendations for Power Platform solutions. Optional rapid prototyping accelerates insight and helps stakeholders visualise the value early.

By combining structured assessment with practical recommendations, the service reduces uncertainty, improves alignment between IT and business teams, and accelerates the delivery of meaningful automation and apps.

What's included in the Power Platform Assessment?

Discovery & Planning Session

Understand business challenges, review current systems, define engagement goals, and align on success criteria.

Facilitated Workshop

Structured sessions to capture pain points, brainstorm solutions, and prioritise opportunities for automation and app development.

Use Case Analysis & Solution Fit

Evaluation of opportunities based on value, complexity, and feasibility, mapped to Power Platform capabilities.

Assessment Report

Comprehensive report including executive summary, prioritised use cases, recommended components, high-level designs, and a roadmap for prototyping or scaled implementation.

Optional Prototype Build

Low-fidelity Power App or Power Automate Flow to demonstrate feasibility and accelerate adoption.

Stakeholder Collaboration

Engagement with up to five core business or IT roles; optional participants accommodated as agreed.

Key benefits

Identify high-value automation opportunities

Focus on solutions that deliver measurable impact across your organisation.

Align IT and business priorities

Clear, structured assessment ensures stakeholders are aligned and buy-in is secured.

Accelerate adoption and ROI

Early prototyping and actionable roadmap help teams implement high-impact use cases quickly.

Reduce wasted effort and risk

Avoid building low-value solutions and prioritise initiatives with clear feasibility and value.

Flexible delivery to suit your schedule

One-day or three-day engagements, delivered onsite or remotely, scale to your organisational needs.

Engagement Options: 1-Day vs 3-Day Assessment

Feature	1-Day Assessment	3-Day Assessment
Delivery Mode	Onsite or remote	Onsite or remote
Scope	Discovery, ideation workshop, initial recommendations	Full assessment including analysis, high-level design, roadmap, optional prototype
Workshop	Single full-day session	Three consecutive full-day sessions
Outputs	Prioritised opportunities, summary recommendations	Comprehensive report, prioritised use cases, high-level solution designs, roadmap, optional prototype
Stakeholder Participation	Up to 5 core roles	Up to 5 core roles + optional participants
Time Commitment	1 day	3 days
Outcome Focus	Quick insight into immediate high-value opportunities	Deep dive for strategic planning and proof-of-concept demonstration

Service details

Implementation

We plan and align logistics, confirm participants, and set success criteria. Workshops are delivered with clear agendas and structured facilitation to capture maximum insight.

Integration with Existing Tools

The assessment leverages your current systems and data to validate opportunities and align recommendations with existing technology landscape.

Requirements & Prerequisites

Confirmed list of participants, agreed scope, access to relevant business data and systems, and necessary decision-making authority.

Reporting & Metrics

Assessment report includes executive summary, prioritised use cases, recommended components, high-level design sketches, and roadmap for future development. Optional prototype outcomes are included where delivered.

Pricing

Model-based pricing dependent on engagement duration, delivery mode, and optional prototype build. Flexible to meet organisational scale and needs.

Why OneAdvanced for Power Platform?

OneAdvanced combines technical excellence with a partnership approach. Our consultants bring deep expertise in process optimisation, digital transformation, and Power Platform capabilities, delivering actionable insights rather than generic advice.

We focus on measurable outcomes. Every assessment captures high-value opportunities, maps them to feasible solutions, and aligns recommendations to your business priorities - ensuring your investment in automation and apps drives tangible impact.

Continuous improvement is built in: lessons learned from previous engagements feed into our methodology to keep your assessment rigorous, relevant, and aligned to best practices.

FAQs

Can the assessment be delivered remotely?

Yes. Both 1-day and 3-day options can be delivered onsite or remotely.

Who should participate?

Core roles include Process Owner, IT Administrator, Operations Manager, and Business Analyst. Optional participants can be included based on organisational needs.

What is the difference between 1-day and 3-day assessments?

The 1-day focuses on quick discovery and initial recommendations. The 3-day includes detailed analysis, roadmap creation, and an optional prototype.

Will we get actionable outputs?

Yes. Deliverables include a prioritised list of opportunities, solution recommendations, high-level designs, and a roadmap for implementation.

Can a prototype be included?

Yes, for 3-day assessments or by agreement in the 1-day option, a low-fidelity Power App or Flow can be delivered.

Are all Power Platform components covered?

Yes. Assessments include Power Apps, Power Automate, Dataverse, and Power BI where relevant.

How is success measured?

By the clarity of prioritised opportunities, alignment between IT and business, and readiness for implementation. Optional prototype outcomes can be used to validate feasibility.

Are post-assessment services included?

No. Full development, managed services, or ongoing governance are out of scope and may be engaged separately.

Powering the world of work.
