

Time & Attendance

Transitioning your workforce management to the cloud

Join us on the journey to a seamless and efficient cloud-based Time & Attendance solution that meets the evolving demands of today's dynamic workforce.

In response to the global shift towards cloud software, we have decided to exclusively offer our Time & Attendance solution from our cloud environment, discontinuing support for on-premise versions. This transition allows us to provide our customers with more secure, scalable, and modern applications by leveraging advanced cloud technologies.

By addressing compatibility and cybersecurity challenges, we can focus our resources on continuous improvement, better responsiveness, and the delivery of new features. This move ensures that your Time & Attendance system remains future-proofed and capable of adapting to your growing business needs.

Scalable and flexible solution

Effortlessly expand your Time & Attendance system as your workforce grows, without the need for major infrastructure overhauls and unnecessary delays. A key advantage of using a cloud-based SaaS solution is its inherent flexibility to adapt to business needs. As your organisation evolves, the system easily accommodates an increasing number of employees, ensuring smooth operations and minimal disruption during periods of expansion.

Seamless experience across all devices

Our cloud-based system will soon feature a modern, intuitive design, built with desk-free employees in mind. The upcoming enhanced Time & Attendance interface is user-friendly and will work seamlessly with our new native mobile app, providing essential workforce management capabilities. This will ensure productivity and ease of access from any location, empowering your mobilised workforce to stay connected and efficient.

New capabilities

- **Next-Gen clocking devices:**
Supports multiple authentication methods, including facial recognition, fingerprint, and proximity authentication
- **Save time with Auto-Rostering:**
Automatically assign the right people to the right shifts at the right times with a single click
- **Detect anomalies with ML Clocking Analysis:** Leverage machine learning to analyse clocking data and identify potential anomalies
- **Simplify login processes:**
Enjoy secure Single Sign-On and Multi-Factor Authentication for streamlined access
- **Native mobile app:**
Enable employees to view schedules, swap shifts, and receive push notifications
- **Accessible data platform:**
Easily access and manage data with the OneAdvanced data platform

Future-proofed and advanced clocking devices

As part of our cloud-based Time & Attendance system, your organisation can benefit from our T2 clocking devices. These devices come equipped with high-quality cameras and fingerprint sensors for improved accuracy and reliability. Designed for simplified maintenance and enhanced security, our T2 devices ensure long-term availability of components and support multiple authentication methods, including facial recognition, fingerprint, and proximity authentication.

Biometric authentication with T2

Our devices use unique biometric identifiers such as fingerprints and facial recognition to address common challenges like buddy clocking, ensuring that only the intended employee can clock-in. This advanced technology captures real-time data on clock-ins and clock-outs, maintaining precise attendance records, improving accuracy and reducing errors during payroll processing.

Safe and secure with SSO

Our cloud-hosted Time & Attendance solution mitigates risks by continuously monitoring and strengthening the cloud service for all customers. Our investment in cloud security protocols ensures a robust system accessible only to authorised employees. Our new Single Sign-On (SSO) feature simplifies login processes, allowing employees to use one set of credentials across multiple OneAdvanced applications.

This offers ease of use and reduces the risk of forgotten passwords. Administrators benefit from centralised user management, making it easier to manage permissions and access levels across the organisation.

Commitment to security and compliance

OneAdvanced Identity, our SSO and Multi-Factor Authentication system, ensures compliance with industry standards and regulations by providing detailed access logs and enhanced audit trails, simplifying the tracking and management of user activities. Additionally, our dedicated and highly trained cloud services team, in line with our ISO 27001 accreditation, ensures that your Time & Attendance data is stored, handled, and processed securely.

Moving forward together

We understand that transitioning to a cloud-based system represents a significant change. We are committed to supporting you through this process and ensuring that the transition is as smooth as possible. Our cloud-based Time & Attendance solution not only addresses current challenges, but also supports your organisation for future growth and in the adoption of new and evolving technologies.
