Apprenticeship Management

AI Agents and Features

AI-powered tools that work for you, not the other way around

Getting great results from AI shouldn't require expert-level prompting skills. That's why OneAdvanced has built a suite of intelligent AI agents and features directly into the Apprenticeship Management system, purpose-built for education workflows and designed to deliver high-quality outputs from the start.

Intelligent Chat Agents

Standalone AI agents accessible via the OneAdvanced AI menu, and on mobile, in the Apprenticeship Management system. Each agent is purpose-built for a specific task, so you add context & let it do the work. No complex prompting needed.

In-Product (Embedded) Agents

AI agents embedded directly into your Apprenticeship Management workflows, appearing exactly where you need them, at the right moment. Triggered from within the platform, they act on live data with one click.

New AI Features

Broader AI capabilities woven into the Apprenticeship Management system experience, such as the AI Side Drawer, that enhance how you interact with data across the whole platform, not just within a single task or agent.

Who Benefits

Learners

- Receive clear, structured feedback that's easy to act on
- Benefit from personalised activities that close KSB gaps
- Access spelling & literacy support generated on demand
- Submit OTJ records with confidence using quality guidance

Employers

- Confidence that OTJ records & evidence meet compliance standards
- Apprentices who are better prepared & supported throughout their journey
- Clear audit trail supported by structured, AI-assisted documentation

Delivery Staff & Assessors

- Generate progress review agendas & meeting summaries in seconds
- Transform shorthand feedback notes into polished learner guidance
- Identify & address missing KSBs with targeted activity generation
- Reduce administrative time spent on repetitive documentation tasks
- Monitor OTJ quality before submission to ensure compliance
- Support with lesson planning & Scheme of Work creation
- Time saved on review feedback across caseloads
- More time with learners due to AI efficiency gains

Co-Created with the Education Sector

Our AI agents and features have been developed in close collaboration with the education sector. Every agent is grounded in real workflows, validated with our sector partners, and built on deep education expertise, so they work the way you work.

Intelligent Chat Agents

Accessible via the OneAdvanced AI menu and on mobile, within the Apprenticeship Management system, our Intelligent Chat agents are designed around specific education tasks. You simply provide context and let the agent do the rest. Users can favourite agents for quick access directly from their homepage.

Apprenticeship Activity Generation Agent

Quickly creates targeted learning activities mapped to specific KSBs and personalised for the individual learner. Helps close evidence gaps and builds portfolio coverage. Assessors can create a specific brief and share activities directly with relevant learners.

Apprenticeship Review Summarisation Agent

Upload a progress review transcript and receive an instant, structured summary with SMART targets extracted and clearly presented. Add context to tailor the summary, then paste directly into the Apprenticeship Management system. Saves significant time and improves record accuracy.

Spelling Quiz Generation Agent

Generates a ready-to-use, customised spelling quiz based on selected theme and difficulty level, complete with answer key. Assessors can share quizzes directly with learners via the Apprenticeship Management system to support literacy development.

Learning Activity Generation Agent

Generates comprehensive, tailored learning activities based on your input and uploaded resources. Removes the need for complex prompting, just provide topic, learner context, and relevant documents to receive a structured, detailed activity plan you can refine interactively.

Lesson Plan Generation Agent

Builds detailed, structured lesson plans based on uploaded syllabi, schemes of work, and learner context, including specific needs such as learners with dyslexia. Standardises quality, saves time, and removes barriers to AI adoption for teaching staff.

Scheme of Work Generation Agent

Creates comprehensive schemes of work based on your input and uploaded syllabus content. Ensures consistent delivery planning across your team, aligned to programme requirements.

Apprenticeship Activity Generation

Quickly build activities targeted at specific KSBs and taking into account a learner's preferences, building evidence to fulfil your learner's Portfolio. AI-generated content requires curriculum review; verify materials before student use, and consult qualified educators for compliance.

Knowledge, Skills & Behaviours (KSBs) *

① List the KSBs the apprentice must demonstrate. Please separate each one or use bullet points.

Apprenticeship Standard (Optional)

② e.g., 'Level 3 Business Administrator'. This helps set the right level of complexity for the activity.

Suggested Time in Hours (Optional)

③ e.g., '4' or '2-3'. The suggested time for the apprentice to complete the activity.

Preferred Evidence Format (Optional)

④ Choose the main format for the evidence. If left blank, a suitable format will be suggested.

Learner Needs/Preferences (Optional)

NEW! In-Product (Embedded) Agents

These agents are built directly into the Apprenticeship Management system, triggering at exactly the right moment in your workflow. No need to switch context, the AI is already there when you need it.

Apprentice Evidence Feedback Agent

Available within the assessor evidence review workflow, this agent restructures shorthand feedback notes into clear, learner-friendly guidance. Simply write rough notes, click 'Rewrite Feedback', and receive a polished output complete with an overview of sentiment, suggested changes, and clear action points. Approve, edit, and submit, all within the system.

Off-The-Job Quality Checker Agent

Enables both learners and assessors to check the quality of an OTJ record against current funding rules before it is saved. Provides a RAG rating with clear guidance on what needs improvement. Learners update their entries based on this feedback, and assessors can re-check until a green rating is achieved, ensuring compliant, high-quality OTJ records every time.

NEW! New AI Features

Our UK Sovereign AI is now embedded across the Apprenticeship Management System, enabling intelligent, real-time support using the data visible on your screen.

Intelligent Chat Side Drawer

The AI Side Drawer is available across the full Apprenticeship Management system. It provides contextual insights, recommendations, and assistance based on the learner, employer, and programme information you are actively viewing, without needing to switch systems or search for information.

Crucially, it enables you to include live, on-screen data directly in your AI queries. Select relevant data points from the page and attach them to your prompt as contextual 'pills', giving the AI the information it needs to generate more accurate, relevant, and personalised responses based on your own live data.

This creates a seamless experience that enhances decision-making, improves efficiency, and supports compliance and quality across the full apprenticeship lifecycle, not just within individual tasks or isolated tools.

Trusted by the Education Sector

- **Over 2 million learners** supported by our education solutions
- **95% of FE Colleges** trust our software
- **1,000+ ITPs** rely on our products
- **30+ years of experience** in the education sector

Part of the OneAdvanced Education Platform

Apprenticeship Management AI Agents and Features are built on the OneAdvanced Education Platform, giving you access to:

Enterprise-Grade Security

Private and secure AI agents with robust privacy measures protecting data at every level. Cloud-based, UK-based data sovereignty, with proactive threat monitoring built into the fabric of the platform.

AI-Powered Innovation

Purpose-built AI agents tailored to education workflows. Our embedded approach frees up time for learners and staff to focus on what matters most.

Seamless Integration

Connect with other OneAdvanced Education solutions including Education Analytics, MIS, ILP and Markbook, and operational & financial management tools.

Continuous Evolution

Regular feature updates driven by sector needs and feedback from our education community. Your platform grows and evolves alongside your requirements.
