Work securely, anytime, anywhere

Powerful document management

The NetDocuments solution integrates smoothly with Partner for Windows (P4W). Combined, they provide a complete document management solution that can help your legal firm meet the key challenges of consistency, reduce data rekeying, mobility, and collaboration.

NetDocuments complements the functionally rich document data merging functionality in P4W to provide either a firm-wide solution, or one that fills specific gaps in areas not currently served by case management.

Providing innovation

As a leader in the development of legal technology, we have a deep understanding of document management solutions that goes back more than 25 years.

This partnership, the first of its kind for NetDocuments, supports us in offering your firm a trusted, innovative and future proof document management platform.
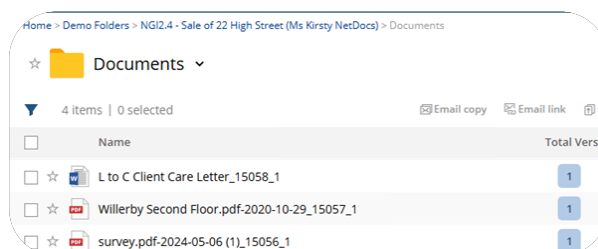

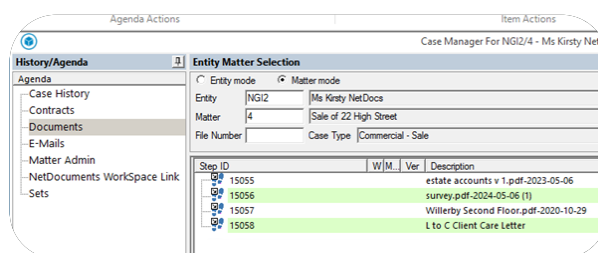

Integration

The integration between P4W and NetDocuments seamlessly connects P4W's case management system with NetDocuments' document management platform, enabling two-way synchronization for streamlined document processing. This integration allows documents to be fully accessible and manageable within NetDocuments, enhancing document mobility, and collaboration across the firm.

Fee earners can securely share documents with clients through NetDocuments' secure links, fostering greater client engagement and satisfaction. This connection empowers UK law firms to deliver more efficient, responsive service while maintaining a secure, unified workflow.

Designed specifically for larger UK law firms, the integration leverages standard technologies from Microsoft, NetDocuments, and OneAdvanced. It combines the automation capabilities of P4W with the flexibility of NetDocuments, streamlining your operations and providing a distinct strategic edge in the legal market. This ensures your firm remains efficient and adaptable, meeting the evolving demands of the industry with confidence.

Smooth implementation

Our expertise is in delivering technologies that solve real business challenges. This partnership allows us to provide unique products, built around the NetDocuments platform, that integrate with both our cloud and on-premise solutions.
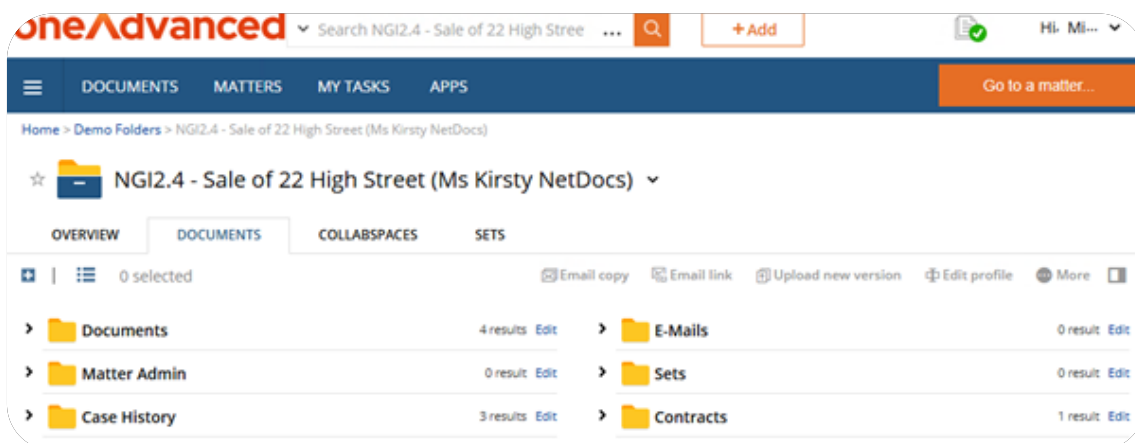

Enhanced security

Providing our customers with the assurance that their sensitive data remains unassailable was one of the key drivers of this partnership.

Our own security auditing processes confirmed that NetDocuments are true experts, capable of delivering world-class levels of robust security and compliance to our customers.

Firms using NetDocuments are offered the peace of mind that comes from knowing its' native cloud platform has built-in certifications, third party testing and audits such as ISO 27001, SOC 2, SOC 2+, HIPAA and SEC.

Core functionalities

- The solution seamlessly establishes a client and matter workspace in NetDocuments that aligns with your P4W structure, enhancing workflow efficiency.

- Enable robust document synchronisation at both the client and matter levels for comprehensive management and access.

- Benefit from a two-way sync of all document types, ensuring information consistency across platforms.

- Retains documents in the local file store for seven days post-sync, providing an added layer of resilience.

- Keep your audit trail up-to-date with automatic updates to the P4W step history, boosting transparency and compliance.

About NetDocuments

NetDocuments was founded by Ken Duncan, Lee Duncan, and Alvin Tedjamulia. Previous to this, they had formed SoftSolutions, a leader in traditional server installed document management software that had won more than 50% of the worldwide document management market. This business was sold in 1999.

These original three founders moved on to create NetDocuments. Their vision was that cloud computing would become the superior model for delivering document management software.

Today, following more than a decade of solid growth, NetDocuments is currently used by thousands of businesses across the globe, efficiently managing more than 1 billion documents and emails every day.

A different approach to document management

- Cloud from the ground up
- Secure
- Intrinsically mobile
- SaaS
- Opex not capex
- Always up-to-date
- No infrastructure to support
- ISO 9001 accredited helpdesk support

Your document is created

Your document is saved

Encryption is added

Your document is split into thousands of sections

Those document sections are then stored in different data centres to guarentee maximum security
