FACT SHEET

New

ePortfolio Learner UX

A new user experience for learners using our ePortfolio SmartAssessor will raise learner engagement helping you to improve outcomes and drive efficiency.

What's New?

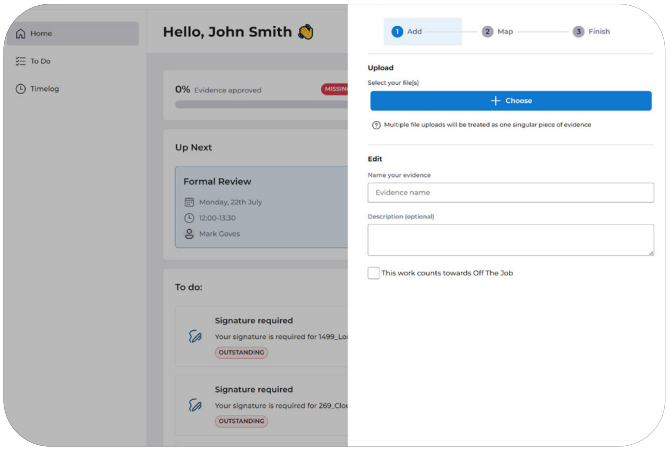
We have worked closely with our customers and learner community to design a brand new learner user experience for our ePortfolio, which will see a complete rethink of how learners interact with the system. With their needs at the centre of the system, learners can access the insights and actions they need in an intuitive and accessible manner.

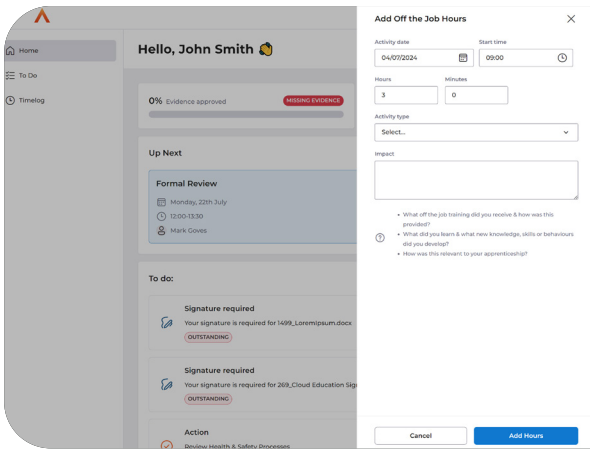
Learners will experience a comletely redesigned user interface that maximises simplicity and accessibility, allowing them to accomplish important tasks with a minimum of clicks and navigation. Fully responsive to mobile, tablet or computer use, the new interface is intended to simplify the most common apprenticeship processes, driving engagement and supporting each learner throughout their programme.

The first release of the learner interface focuses on learner progress, actions, evidence upload, OTJ hour logging & more . Each of these processes has been carefully designed to maximise efficiency and provide an intuative workflow.

Key Capabilities:

- Front and centre view of progress through the programme and off the job requirements
- Unified to-do list for all actions, avoiding the need to navigate between different lists and action types
- New evidence capture wizard, accessible from the front page
- Simplified OTJ hour logging with fewer different stages in the recording process
- Responsive display for mobile, tablet or computer use





Beyond the Learner

As we progress further into this project we will be delivering a similar new user experience for your delivery staff. Rethinking the user experience from scratch, ensuring that the system puts insights and actions from across our product range at their fingertips to drive efficiency and help target interactions for maximum impact.

What's Next?

This is the first step in a wider project that is being undertaken by OneAdvanced to revolutionise digital apprenticeship management by providing a seamless user experience that spans our Learner Management System PICS, our ePortfolio Smart Assessor and our Assessment & learning tool bksb. This will provide customers utilising these three products with the ultimate feature rich, integrated, end-to-end solution.

Work is already under way on integrating Assessment & Learning into the new interface which will allow learners to access their assessments and learning resources seamlessly alongside their ePortfolio. Once our Learner Management system is fully integrated a learner will have a single point of access from their initial enquiry, through their onboarding process, fulfilling paperwork, skills & learning assessments and throughout their programme completing their ePortfolio, learning activities & more.
